Research presentation introduction

Subject: Distinguished Researcher Introduction

Esteemed colleagues and fellow researchers,

I am pleased to introduce Professor Michael Chen, whose presentation on artificial intelligence ethics will conclude today's symposium.

Professor Chen serves as Director of the AI Ethics Institute at Stanford University and has spent the last decade examining the intersection of technology and human rights. His research has directly influenced legislation in twelve countries and shaped industry standards for major technology corporations.

He is the author of three seminal books on AI ethics, including the widely-cited "Algorithmic Justice: Ensuring Fairness in Automated Decision-Making." His work has been published in Nature, Science, and the Journal of AI Research, among other prestigious publications.

Professor Chen's current research focuses on bias detection in machine learning systems - work that has practical applications for hiring practices, loan approvals, and criminal justice reform.

Today's presentation, "The Moral Machine: Programming Ethics into AI Systems," promises to challenge our assumptions about technology's role in society.

Please welcome Professor Michael Chen.
